Nguyen Doan Hieu

Fresher Devops

0384617767 ndh.sunday@gmail.com Dong Anh, Ha Noi

OBJECTIVE

Software Engineering graduate with a strong focus on System Operations and Automation. Built a solid foundation in Linux (Ubuntu) and Docker through hands-on academic projects. Currently self-studying AWS and Cloud Infrastructure. Seeking a DevOps Fresher to apply technical skills in a real-world production environment and contribute to system reliability.

EDUCATION

FPT University 09/2022 - 12/2025

Software Engineering

GPA: 8.23

CERTIFICATIONS

IELTS 5.5 2022

TECHNICAL SKILLS

Cloud Computing (AWS)

- Infrastructure: VPC, IAM, EC2, S3, Route 53.
- Compute & Serverless: Lambda, Amazon ECS (Fargate/EC2 launch types), ECR.
- Infrastructure as Code: AWS CloudFormation, AWS CDK.
- Observability: Amazon CloudWatch, AWS X-Ray.

DevOps & Platform Engineering

- Linux Fundamentals: Ubuntu/Debian (CLI, File permissions, Package management).
- Containerization: Docker (Multistage builds, Docker Compose).
- CI/CD: GitLab CI (Pipeline configuration, Caching, Artifacts), AWS CodePipeline, CodeBuild, CodeDeploy.
- Version Control: Git (Branching, Merge conflicts).

Programming Foundations

- Languages & Frameworks: Java (Spring Boot), Python (FastAPI), TypeScript, Golang (Basic)
- Integration: Experienced in connecting Frontend-Backend APIs and handling JSON data flow.
- Data Stores: Postgresql, MySQL

PROJECTS

FUACS - FU Attendance Checking Smart 09/2025 - 12/2025

Role: Fullstack developer

Team size: 5

Technology description:

- Frontend: Next.js 15, TypeScript, TanStack Query, shadcn/ui.
- Backend: Spring Boot 3, Spring Security OAuth2, PostgreSQL, Flyway.
- AI Service: Python FastAPI, InsightFace (buffalo_l), ONNX Runtime with GPU acceleration.

Key Achievements:

- System Architecture: Designed a decoupled architecture separating Business Logic from AI Inference. This approach ensured independent scaling and prevented heavy AI tasks from blocking core user operations.
- Performance Optimization: Integrated InsightFace (ONNX Runtime) with GPU acceleration, optimizing API communication to achieve ~95% accuracy with <500ms latency per recognition request.

- Security & Deployment: Implemented Spring Security OAuth2 with Role-Based Access Control (RBAC) for secure resource management. Containerized services using Docker for consistent deployment environments.

WORK EXPERIENCE

FPT Software 09/2024 - 07/2025

Backend/Frontend Developer Intern

- Participated in the maintenance and enhancement phase of a large-scale enterprise application
- Backend Focus (Django/PostgreSQL): Developed new business features and optimized existing APIs to ensure system stability. Analyzed and fixed critical logic errors in the backend service.
- Frontend Integration (Angular): Responsible for connecting Backend APIs with the client-side, ensuring accurate data rendering and handling seamless integration flows.
- Collaborated with the team to debug issues across the full stack and strictly followed Agile/Scrum workflows.

ADDITIONAL INFORMATION

English: Understand English at a Intermediate Level.
Technical Research: Ability to read and understand technical documentation to resolve errors.
AI Tools: Effective use of AI tools with controlled input context and validated output.
Certifications & Training: Learning AWS Certified Developer – Associate (DVA-C02)
